

GUMMY BEANS

White Paper 2.0

Introduction

There are over 400 million individuals in the world with a diabetic diagnosis. Throughout the years, new treatments have been developed through the power of research, science, and medicine. However, there are many that still suffer from the disease, and it's time to be the change.

Gummy Beans is the connection between diabetes charity foundations and cryptocurrency.

What is Gummy Beans?

Gummy Beans is a Binance Smart Chain token that rewards all holders in a stable coin called BNB. Our mission and goal is to help fund new treatments and support local and global public outreach in hopes to find a cure for diabetes. A key part of our mission is to spread awareness and educate the public on the causes, treatments and prevention of several types of diabetes.

What drives Gummy Beans?

Gummy Beans' founders have an extreme passion supporting efforts to cure Diabetes that stem from experience in the healthcare field, as well as friends and family members who suffer from the disease.

With the rising costs, many who suffer from diabetes have difficulty paying for their medical equipment and medications. An individual who suffers from diabetes pays an average of \$6,000 dollars per year for their insulin. This puts a burden on many individuals and their families. Some are unable to afford their medications, causing an increased risk of avoidable medical complications in the future.

Gummy Beans plans to be an advocate for these individuals by fighting to lower medication and equipment costs and creating support groups for them and

Gummy Beans Tokenomics

The Gummy Beans token first and foremost was created to fund charity foundations and individuals who suffer from Diabetes. With that in mind, we designed and implemented key features that provide funding support for the diabetic cause, while giving incentives to the investors.

BNB Redistribution – Every transaction is redistributed in BNB to all holders. The redistribution time has been set to every two hours to ensure gas fees are saved and holders earn more.

2% Marketing Wallet – The marketing wallet is a key component of our token. This wallet enables outreach and resources that are beneficial to expand and further develop the token and brand.

2% Charity Wallet – If a token had a heart it would be this wallet. The foundation of this coin depends on spreading awareness, educating the public, and being able to fund foundations and charities to find a cure and new treatments for diabetes. This wallet is used to donate several times per week to different foundations and charities. Gummy Beans is 100% transparent and provides each donation receipt to the public. Our community is also provided an opportunity to decide which charity we donate to.

2-4% Automatic Liquidity– This wallet ensures we preserve liquidity and assists in growing our

Gummy Beans Key Features

- Gummy NFTs
- Gummycade
- GummyDex
- Foundation

Gummy NFTs

Our Platform

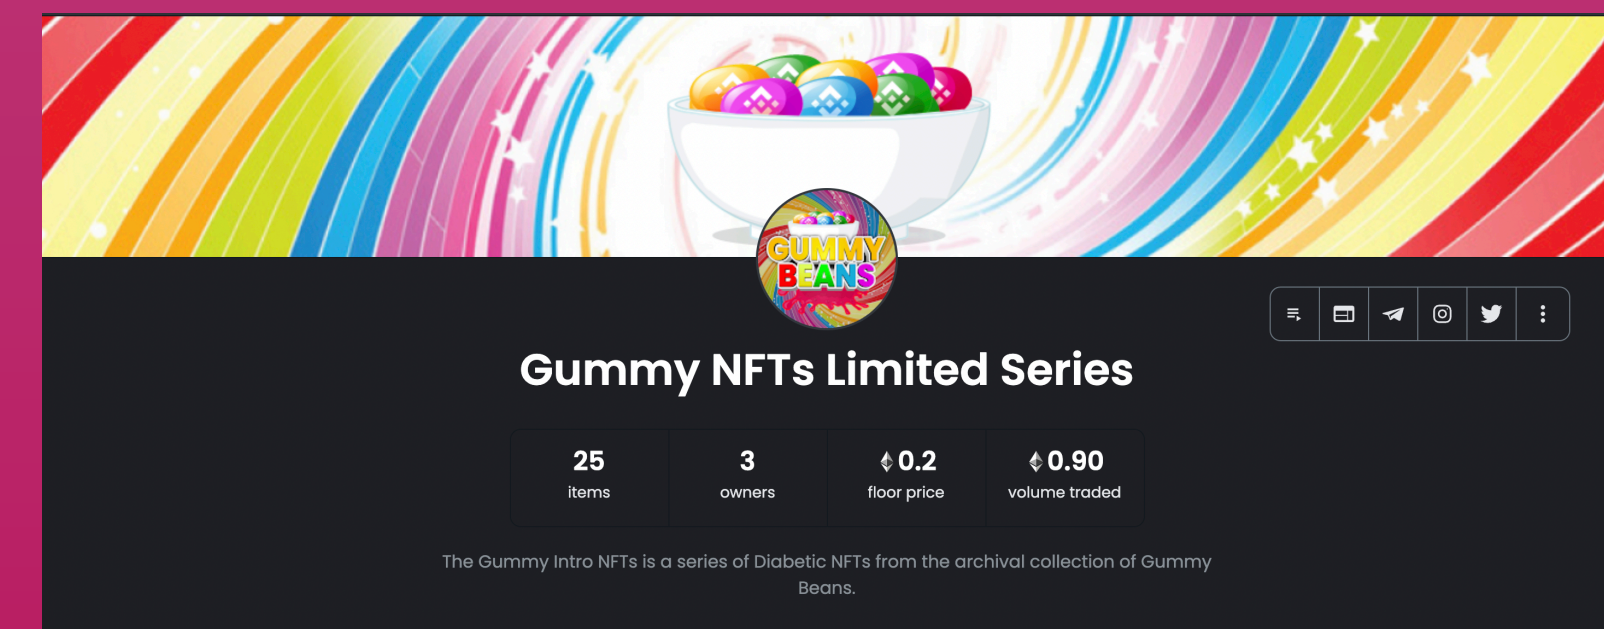

Gummy Beans will release exclusive NFTs around its eco-system through a Gummy NFT platform that provides a marketplace where investors and consumers can buy, sell, and mint their own NFTs. Proceeds of every NFT purchased will be given back to assist the diabetic community. Our NFT platform will be featured of limited edition NFTs throughout the coming months. The NFT marketplace will be fully deployed in Q4 2021.

What is an NFT?

An NFT (Non-fungible token) is a digital asset that represents real-world objects like art, music, in-game items and videos. They are bought and sold online, frequently with cryptocurrency, and they are generally encoded with the same underlying software as many cryptos.

Gummy Kids

Gummy Kids NFTs is one of our exclusive collections that will be minted. Each NFT will be a one-of-a-kind drawing by a child that has diabetes. The proceeds from this collection will benefit each child and their family. This will benefit the public directly and help raise awareness within the cryptocurrency space.

GummyCade

Gummycade is a unique cryptocurrency gaming platform. Investors can play several games in our collection to gain more Gummy Beans and learn more about Diabetes.

GummyBall– Released October 9th. Allows investors to spin a gummy ball machine for their chance to win up to 4x their investment

GummyRoulette– Released November 1st, is a full roulette game that allows investors to win up to 10x their investment.

We are developing and will deploy several games that both adults and children will enjoy playing. Diabetes educational games will also be added.

Every game is incorporated as part of our token's **Buyback program**. Meaning, a percentage of the proceeds from the games is used to purchase Gummy Beans. 50% of the purchase is sent to the "BURN" address to remove the tokens from circulation. This process helps us to maintain a healthy chart.

GummyDex

GummyDex will bridge multiple chains of crypto to allow swapping from one chain to another. We have incorporated this into our gummy eco-system to allow investors to be able to seamlessly buy Gummy Beans from all platforms. GummyDex is set to be launched at the end of Q4 2021.

We have already released the first component of GummyDex called GummySwap. GummySwap allows trading to occur seamlessly without slippage, bugs and other malfunctions that exist in other decentralized exchanges.

Gummy Beans Foundation

We have donated and will continue to donate to various diabetic foundations and charities. We choose our recipients based on various vetting research and assistance of our investors.

We are in the process of creating our very own international foundation and looking to partner with charities and organizations that share our vision in funding new treatments, and above all finding a cure for Diabetes.
